	Database/System Name	Description of Information	Age of System	Public Access (Y/N)
1	Central Command Parking	Web based technology offers an alternative to the monthly parking program for people who travel to their office only a few times per week or at different times during the day when "all day" parking specials are not typically offered. This database is maintained by OCTO for both production and development. All changes and updates to this database will be done by the vendor on the development database and will be migrated by OCTO once approved by DGS IT.	4 years	No Public Access - Security Reasons - This application resides on the secured DC Gov network which is only accessible by employees of the District.
2	GE Picture Perfect Security Management System	This system is used by the PSD Division to manage card access to select doors in District owned and controlled buildings. Through the system PSD can grant and revoke access to card reader doors and can monitor alarms received in areas secured through the system. The system contains the names of District staff and vendors, their badge numbers, and their access levels. All changes and updates to this database will be done by the vendor on the development database and will be migrated by OCTO once approved by DGS IT.	9 years	No Public Access - PSD Security Reason
3	Primavera (P6)	P6 is a project management system that will inform Prolog about project timelines and milestones. Both the contractor and the Project Manager will work collaboratively in P6 as it will be project schedule of record. This system is currently in the process of being fully implemented and is targeted to come online at the beginning of FY12. All changes and updates to this database will be done by the vendor on the development database and will be migrated by OCTO once approved by DGS IT.	4 years	No Public Access - This application resides on the secured DC Gov network which is only accessible by employees of the District.
4	Prolog	Prolog is a construction project management system. Prolog streamlines operations for project managers, allowing them to track expenditures and plans against project timelines, invoice payments to vendors, and a host of other critical activities. The system also allows DGS administrators to inform project managers about fund availability and generate reports on project costs and timelines. All changes and updates to this database will be done by the vendor on the development database and will be migrated by OCTO once approved by DGS IT.	5 years	No Public Access - This application resides on the secured DC Gov network which is only accessible by employees of the District.
5	iPlan	iPlan hosts the facilities condition assessment database that contains information related to the physical characteristics and building elements of the facilities as well as their energy usage and security features. The system will help DGS optimize Capital Construction Division and Facilities Division lifecycle planning and budgeting during all phases of construction and re-purposing of District owned property, as well as improving operational performance to drive its overall capital strategy. This database is accessed via a web portal or link to provide DGS with current facility condition on property lease on owned by the District. This data is being planned for migration into Archibus.	4 years	No Public Access - This application resides on the secured DC Gov network which is only accessible by employees of the District.
6	Archibus, an Integrated Workspace Management System (IWMS)	An Integrated Workplace Management System (IWMS), is a software that encompasses real estate management and facilities management functionality into a single source solution. Combined into an application suite with collaboration tools such as workflow, document management and reporting tools, Archibus will be a critically important tool to DGS in that it will facilitate access to accurate, consistent and reportable information. This database is maintained by OCTO and DGS IT for production and development. Archibus installed modules are as follows: · Real Estate Portfolio Management · Space Planning & Management · Asset Management · Building Operations	9 years	No Public Access - This application resides on the secured DC Gov network which is only accessible by employees of the District.
