Suzie,

We will get more drawings done per your request but wanted to let you know these are the drawings we present to the city to obtain permits and to fly underneath the radar as much as possible. It will take a few days but we will have what you requested.

Best Regards,

Donald MacCord

Thank you Greg. This is a good start but we still need some more detail before we can approval and allow the signs to be installed. Below are a few key areas that we need to understand. Are you available tomorrow or Monday? I think it would be beneficial for us all to jump on a call to discuss rather than back and forth emails.

- 1) Drawing set lacks overall architectural drawings of the exterior of the building. Where the signs are affixed to the building exterior? I know you provided renderings but we need drawings showing the exact location. For example, dimensions of how far above the starbuck's door is the sign located?
- 2) Lack of structural drawings. Have the anchoring points and live and dead loads imposed to the building exterior been evaluated by a Structural Engineer for the various exterior anchoring points and impacts on building skin such as being affixed to existing precast hung panels etc.
- 3) No water proof details provided. What steps are being taken in the design to ensure water tightness of the exterior of the building?
- 4) Drawing set lacks electrical drawings. How are these electrified signs being wired to the base building and will there be any exposed conduit to the exterior or interior of the building? How does this electrical wiring enter the building and are these penetrations being made water tight?

Thanks,

[REDACTED]

Greg,

Please make sure [REDACTED] gets the final signed of construction drawing today for L'Enfant. I know this is a little fluid as we are trying to figure out a way to get the on ramp locations done. Please sent her everything.

Hi Greg,

[REDACTED] one of the property managers at L'Enfant Plaza will get back to you later today on the internet provider.

On another note, I was going to reach out to Don today. Don sent over the attached engineer drawings and they are very difficult to follow. What we really need is a consolidated set of plans that show the building elevation and where the sign goes, your electrical conduit plan so we can insure there are not large wires running down the side of the building and how you plan to attach the signs to the side of the building. It might make sense the next time you or Don are in DC to meet with our construction manager and your architect / engineer to review what we need in terms of drawings before you will be allowed to install.

Thanks,

[REDACTED]

Hi [REDACTED]  
My name is Greg Miller, I work with Don MacCord at DigiOutdoor. As you know we're working on developing the signs at L'Enfant and we've been talking with [REDACTED] who's been a huge help. Had a quick question regarding which internet provider you use at L'Enfant? We want to make sure we use your preferred choice.

Thanks,

Greg L. Miller

Subject: L'Enfant - DigiOutdoor Signs

Hi Don,

It was great to catch-up this morning. As discussed, we highly recommend that you reach out to [REDACTED] (contact information below) regarding running power to the signs. [REDACTED] has a ton of institutional knowledge about L'Enfant Plaza and I think using him as your electrical subcontractor would save you a lot of time and money. In total agreement to focus on the 4 "easy" signs (near the east retail entrances and D street), please send a draft of the drawings for these signs by next week so we can provide comments particularly on the electrical and how the signs are attached to the building.

[REDACTED]

m

Thanks,

[REDACTED]
