FY 2021, to date. For each initiative please provide:

(or expected to be completed);

Initiative Description	Funding Required
<p>The launch of DC Water's "Project Zeus" the implementation of a cloud-based Oracle Enterprise Resource Planning (ERP) platform delivers an integrated IT solution for enterprise-wide transactional data management across multiple business functions of Authority. This platform will eventually replace legacy systems including Lawsons, Dayforce and Maximo offering powerful new tools for staff. As of October 2020, Oracle ERP program went live marking the successful on-time and under budget completion of its Phases I & II (Financials and Procurement). In November 2020, DCW initiated Phase III & IV (Budget and Human Capital Management).</p>	<p>FY2020: \$3,782,740 FY2021: \$5,561,709</p>
<p>The objective of this initiative is to streamline and enhance our capital procurement capabilities, align ourselves with leading practices to ensure transparency, increase value, manage risk, and address customer affordability.</p>	<p>Not applicable.</p>
<p>In December 2020, we began efforts to remedy the Authority's Professional Engineer statutory requirements to comply with the Department of Consumer & Regulatory Affairs (DCRA) regulations. DCW intends to complete its compliance requirements by the required March 1, 2021 due date.</p>	<p>FY2021:\$500k</p>
<p>The purpose of the Innovation Program Refresh is to create the framework, governance, and policies for an enterprise- wide Innovation Program to transform how we do business and innovate across DC Water. This program will guide how we discover, prototype, pilot, and deliver projects and solutions to, for example, increase efficiency, improve customer service, and modernize our infrastructure.</p>	<p>FY2020: \$321K</p>
<p>The development of the new strategic plan, <i>The Blueprint 2.0</i> was initiated in October 2020 with a number of planning meetings, document requests, project team introductions, and coordination with the Enterprise Program Management Office in an effort to fine tune and finalize the approach. Completion of the new strategic plan is expected by the end of FY2021.</p>	<p>FY2021:\$527K</p>

<p>In June 2020, the Board of Directors approved the revisions to DC Water’s Business Development Plan. The approved changes represent a significant overhaul of DC Water’s practices and procedures relative to business diversity and inclusion, capacity building, and supportive services for certified firms. More specifically, the revisions are intended to establish goals and strategies to recruit diverse, highly capable contractors, build an inclusive work environment, and ensure continued progress.</p>	<p>Not applicable.</p>
<p>The Voice of the Customer(VOC) effort aims to leverage proven Qualtrics software and tools to collect useful and actionable data from customers. These periodic surveys will provide insights into customers' satisfaction levels with DC Water’s services and experiences. VOC represents an important step forward for the Customer Experience cluster and the Authority, in that it will generate the type of customer insights that will drive organizational improvements and also demonstrate that DC Water cares about our customers and the quality of service we provide for them.</p>	<p>FY2020: \$219,745 FY2021: \$250,000</p>

Question 58 - Status Update on Sewer Rehabilitation Projects

P6 Code	Project	Description	Budgeted Total Capital Cost	Remaining Budget	Status	Design Start	Construction Start	Project Finish Date
A419	Watts Branch Sewer Rehabilitation	This project is to design and construct sanitary sewer interceptors, trunk sewers and force mains identified as requiring upgrade by the major planning and condition assessment program underway for the sanitary sewer system. This project is needed to construct new and rehabilitate or replace aged infrastructure to restore integrity and reliability of DC Water's sanitary sewer system.	\$7,711,724	\$803,912	In Construction	01-Jun-07 A	29-Oct-08 A	31-Mar-21
A432	Inflatable Dam Interim Upgrades	This project will assess the inflatable dams and make recommendations for replacement and/or interim improvements required. The dams in the system operate in conjunction with the Main and O Street Pumping Stations to manage combined sewer overflows within the system. Dams will be replaced with in-kind dams, which will include replacement of the rubber bladder, anchors, and mechanical components associated with the dam operation. Several inflatable dams need new air compressors and repairs to ancillary safety equipment, such as emergency telephones, ladders, and exhaust fans as part of this project.	\$4,897,484	\$4,446,900	In Design. Question 41: Please provide an update on the progress of the Clean Rivers Project, including:

- For each component of the Project, including Tunnel development and Green Infrastructure installation:
 - A description.
 - A status report, including a timeframe for completion.
 - The amount of capital funds spent and available.
 - Planned remaining spending each year until completion in 2032.
 - Annual maintenance costs for any completed projects.
 - The expected maintenance costs per year once the projects are complete.

Response:

Description

The purpose of the DC Clean Rivers Project is to control combined sewer overflows (CSOs) to District waters. In the older sections of the District, there is a single combined sewer in the street which handles both stormwater runoff and sanitary sewage from homes and businesses. During dry weather, sewage is conveyed to DC Water's Advanced Wastewater Treatment Plant at Blue Plains (Blue Plains), located in the southwestern part of the District on the east bank of the Potomac River. When the capacity of a combined sewer is exceeded during storms, the excess flow, which is a mixture of sewage and stormwater runoff, is discharged to the Anacostia and Potomac Rivers, Rock Creek, and tributary waters. This excess flow is called CSO and there are 48 potentially active CSO outfalls in the District's combined sewer system.

The Clean Rivers Project consists of deep tunnels, targeted sewer separation and Green Infrastructure (GI) designed to reduce CSO discharges to District waters. The project is necessary to bring CSOs into compliance with the District's water quality standards. After completion, the volume of CSO discharges in an average year of rainfall by 96% system wide, with the following reductions for each receiving water: 98% reduction to the Anacostia; a 93% reduction to the Potomac; and a 90% reduction to Rock Creek. US EPA and the District Department of the Environment have determined that the plan will bring CSOs into compliance with the District's water quality standards, subject to post construction monitoring.

The project is required by a Federal Consent Decree signed by US EPA, the Department of Justice, the District and DC Water. The Consent Decree dictates a schedule for implementation and includes many interim milestones. Stipulated penalties can be assessed for failure to meet Consent Decree deadlines. The project is on schedule to meet the Consent Decree deadlines to place projects in operation to control CSOs in accordance with the specified deadlines. The major milestones in the Consent Decree are as follows:

- March 23, 2018 - the Anacostia River Tunnel system from Blue Plains to RFK Stadium including a new Wet Weather Treatment System at Blue Plains was required to be placed in operation by this date. DC Water met this deadline by placing this portion of the tunnel system in service on March 20, 2018. From March 20, 2018 through January 2, 2021, the system has performed exceptionally, capturing more than 10.1 billion gallons of CSO and removing more than 4,500 tons of trash and debris, preventing it from being discharged to the Anacostia River.
- March 23, 2025 - the Northeast Boundary Tunnel which runs from RFK Stadium to 6th and R St NW is required to be placed in operation by this date. The project has been accelerated to provide early flood relief to the Northeast Boundary area including Bloomingdale and LeDroit Park and is scheduled to be placed in operation in 2023.
- March 23, 2030 - the Potomac Tunnel which addresses the major Potomac River CSOs is required to be placed in operation by this date.

The Consent Decree was amended in 2016 to include green infrastructure for the Potomac and Rock Creek and to extend the time required to implement the projects from 2025 to 2030. The modification required DC Water to construct initial green infrastructure projects in the Potomac and Rock Creek sewersheds and to evaluate these projects to determine their practicability. If green infrastructure is determined to be practicable, then the remaining green infrastructure projects would be constructed, otherwise gray infrastructure projects would be implemented. DC Water has completed the practicability assessments and determined the following:

- For Rock Creek, DC Water determined that full scale implementation of GI was impracticable primarily due to high cost to ratepayers over the long term. Instead, DC Water recommended a hybrid approach, combining the best of both green and gray infrastructure to optimize the benefits of each. The hybrid approach comprises constructing GI to manage 92 impervious acres and a 4.2 million gallon storage facility to control CSO 049 in Piney Branch. EPA approved this approach and a nonmaterial modification of the Consent Decree was signed by the parties in December 2020.
- For Potomac CSOs 027, 028 and 029 - green infrastructure is impracticable due to cost and community/approval agency concerns about constructing green infrastructure in the historic district. Per the Consent Decree, DC Water will therefore extend the Potomac Tunnel to intercept CSO 027, 028 and 029. EPA approval of this practicability report is expected early in calendar year 2021.

Status Report, Capital Funds Spent and Available, Planned Remaining Spending

Table 1, below, includes a status report on component of the Clean Rivers Project, the amount of capital funds spent and available, and the planned remaining spending.

Operation and Maintenance Costs

- Completed Projects
 - The Anacostia River Tunnel system from Blue Plains to RFK Stadium including a new Wet Weather Treatment System at Blue Plains was placed in operation March 20, 2018. Estimated operation and maintenance costs for tunnels and appurtenances is approximately \$600,000 per year, while the cost of the Tunnel Dewatering Pumping Station and Wet Weather Treatment Facilities at Blue Plains is approximately \$5.76 million per year.
 - The first Potomac and Rock Creek Green infrastructure projects manage approximately 32 impervious acres at 1.2” of rain. Maintenance costs are approximately 480,000 per year.
- Future Projects
 - The estimated operation and maintenance costs for tunnels and appurtenances when the tunnel system is complete is approximately \$1.35 million per year (2020 dollars), while the cost of the Tunnel Dewatering Pumping Station and Wet Weather Treatment Facilities at Blue Plains is approximately \$5.76 million per year. Note that many of the facilities have not been designed or constructed yet and these costs may therefore change as the facilities are developed.
 - For the green infrastructure, ultimate build out will comprise GI managing 92 impervious acres in Rock Creek and the GI demonstration project in the Potomac which manages approximately 8 impervious acres for a total of 100 acres. We estimate the annual operation and maintenance cost to be about \$1.5 million per year in year 2020 dollars when all acres are complete.

Anacostia River Projects																			
A	Blue Plains Tunnel	The Blue Plains Tunnel is 23 foot inside diameter tunnel, approximately 24,000 feet long from Blue Plains to Main Pumping Station near the National Stadium. The tunnel includes 5 shafts and provides approximately 73 million gallons of storage to provide CSO control and to reduce peak flows in wet weather to Blue Plains to enable more economical nutrient removal for the Chesapeake Bay. Voted “2016 Project of the Year” by Engineering News Record.	358.5	0	The project is complete (started in 2011, completed in 2016)														
B	Tingey Street Diversion Sewer	Division B consists of two chambers which divert flows from existing CSO 013 and 014 sewers into a new sewer along Tingey Street. The sewer connects to the Blue Plains Tunnel at Main Pumping Station. The purpose of the project is to intercept CSO 013 and 014 and convey the captured CSO to the tunnel.	16.5	0	The project is complete (started in 2012, completed in 2014) Worked closely with DMPED and completed project prior to the grand opening of Harris Teeter and other commercial establishments in the Navy Yard area.														
C	CSO 019 Overflow and Diversion Structures	This project consists of a diversion structure to intercept CSO 019 near RFK stadium, the largest CSO in the system. The project also includes an overflow structure that relieves flow to the Anacostia River when the capacity of the tunnel is exceeded.	31.0	0	The project is complete (started in 2011, completed in 2013)														
D	JBAB Overflow and Diversion Structures	The JBAB Overflow and Diversion Structures captures flow from the Potomac Outfall Sewers and convey it to the Blue Plains Tunnel for treatment at Blue Plains. The overflow structure provides a relief for CSOs when the capacity of the tunnel is exceeded. The project also includes installation of monitoring instrumentation at multiple sites throughout the city.	60.6	0.5	The project is complete. I	Main Pumping Station Diversions	Division I consists of diversion structures and appurtenances to intercept CSO 009, 011a and 012 at Main Pumping Station near the National Stadium. Other items in Division I include relocation of the Low Area Sewer, surge storage tank and weir, shaft internal structures, and air management facilities.	59.6	0	The project is complete (started in 2014, completed in 2018)															
J	Northeast Boundary Tunnel (NEBT)	The Northeast Boundary Tunnel is 23 foot inside diameter tunnel, approximately 27,000 feet long from RFK Stadium to 6 th and R Street NW. The Tunnel will provide storage for CSO controls as well as conveyance to relieve chronic flooding in the Northeast Boundary Area. Sewer diversion facilities will serve five chronic flood areas: Mt. Olivet Road, Rhode Island Metro Station, Bloomingdale, 6th Street NW and R Street NW. The First Street Tunnel will be connected to the Northeast Boundary Tunnel as part of this project.	634.8	296.6	The design-build project was awarded in September 2017. P	First Street Tunnel	The First Street Tunnel serves the Bloomingdale and LeDroit Park neighborhoods around First Street NW and Rhode Island Avenue. The project schedule and scope has been altered from the Facility Plan to meet the goals of the Mayor's Task Force on Flood Prevention in Bloomingdale and LeDroit Park and the Northeast Boundary Neighborhood Protection Project. The project include a 20 ft inside diameter tunnel approximately 2,700 ft in length. Three diversion chambers divert flow from existing trunk sewers to the tunnel through drop shafts. The tunnel was constructed and in service several years before completion of the Northeast Boundary Tunnel, which will convey flow from the First Street Tunnel to the Blue Plains wastewater treatment plant. Until the NEBT is constructed, First Street Tunnel will be used for storage and will be pumped out after use.	175.3	0	The project is complete (started in 2013, completed in 2016)

Z	Poplar Point Pumping Station Replacement	Division Z consists of the construction of the new 55 million gallons per day Poplar Point Pumping Station to replace the existing pumping station. It is impracticable to rehabilitate the existing facility due to constraints in the layout and design of the facility.	71.4	0.3	The project is complete (started in 2015, completed in 2018)

PUBLIC WORKS AND CAPITAL IMPROVEMENTS

DC Water - \$50M Request

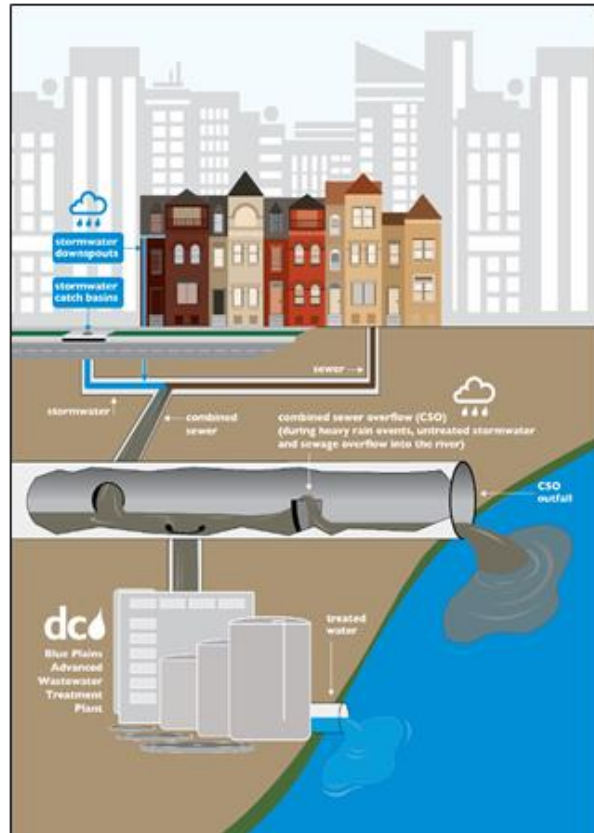

Under the terms of the 2016 amended consent decree between DC Water, the District of Columbia, the U.S. Department of Justice, and the U.S. Environmental Protection Agency (EPA), DC Water is implementing the \$2.7 billion DC Clean Rivers Project to reduce combined sewer overflows to the Anacostia and Potomac Rivers and Rock Creek. The project is a crucial component of both the District's and federal government's efforts to improve and protect the quality of the District's waterways and the Chesapeake Bay. The DC Clean Rivers Project involves constructing an extensive underground tunnel system to control combined sewer overflows and reduce surface flooding due to undersized pipes within the combined sewer system. Green infrastructure will also be installed to both reduce the amount of stormwater runoff entering the combined sewer system and improve the quality of the runoff before it enters local waters. The District is partnering with the federal government to share in the cost of implementing the DC Clean Rivers Project, as the federal government is/was:

- The original designer and builder of the combined sewer system, which was constructed decades prior to the District of Columbia Home Rule Act;
- The enactor of subsequent legislation and regulations mandating construction of the project;
- A major user of the combined sewer system; and
- A major beneficiary of the project.

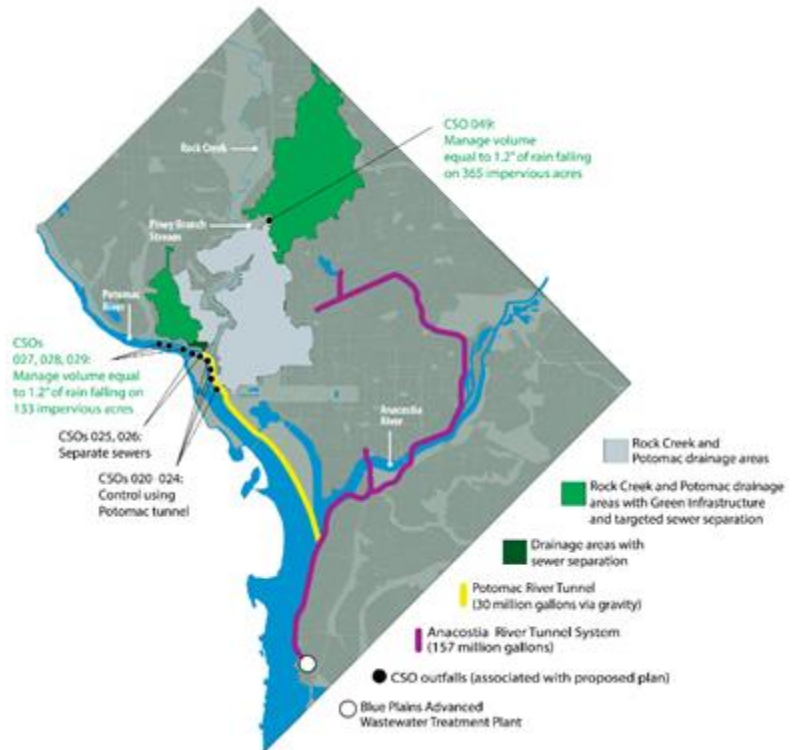

The District requests \$50 million for the DC Clean Rivers Project.

Purpose

The sewer system in the District is comprised of both combined sewers and a separate sanitary sewers. While sanitary sewers carry only sewage, combined sewers carry both sewage and rainfall runoff from storms. Modern practice is to build separate sewers for sewage and stormwater; no new combined sewers have been built in the District since the early 1900s. Approximately one-third of the District is served by combined sewers, the majority of which are in the older, developed sections of the District.

In a combined sewer system, during dry weather conditions, sewage from homes and businesses is conveyed to DC Water’s Blue Plains Advanced Wastewater Treatment Plant (Blue Plains), located in the southwestern part of the District on the east bank of the Potomac River. There, the wastewater is treated to remove pollutants before being discharged to the Potomac River. When it rains, the capacity of the combined sewers can be exceeded, and the excess flow, a mixture of sewage and stormwater runoff, is discharged directly into the Anacostia and Potomac Rivers, Rock Creek, and tributary waters without treatment. These discharges are called Combined Sewer Overflows (CSOs). There are 48 potentially active CSO outfalls in the District’s combined sewer system.

The DC Clean Rivers Project is a massive infrastructure program designed to substantially reduce CSOs, resulting in significant water quality improvements throughout the District and the downstream Chesapeake Bay. The project includes approximately 18 miles of deep underground tunnels that are larger than existing Metro tunnels. The tunnels are designed to capture and store CSOs during heavy rains and transport them to Blue Plains for treatment. The project is required by a 2005 consent decree between DC Water, the District of Columbia, the U.S. Department of Justice, and the EPA.

On January 14, 2016, the first amendment to the consent decree was entered in U.S. District Court to modify the DC Clean Rivers Project to include both gray and green infrastructure. The modification required DC Water to construct demonstration projects to evaluate the practicability of Green Infrastructure. The practicability evaluations have been submitted to EPA for review. A hybrid green and gray approach is recommended for Rock Creek while construction of the Potomac Tunnel to control all Potomac River CSOs is recommended on the Potomac River. The entire DC Clean Rivers Project is required to be complete by 2030.

On March 20, 2018, DC Water placed into operation the first phase of the CSO tunnel system serving the Anacostia River on budget and in advance of the schedule deadline stipulated by the consent decree. This phase of the project included 7 miles of 23-foot diameter tunnels, multiple diversion structures and drop shafts, a deep underground pumping station to dewater the tunnel, and new treatment facilities to help process the additional CSO flow diverted from the Anacostia River to Blue Plains. Between March 20, 2018 and August 31, 2020, the system has captured and treated more than **8.6 billion gallons** of combined sewer overflows. In addition, over **4,000 tons** of trash, debris, and other solids have been diverted from the waterway and instead to proper disposal. Capture has been about 90%, exceeding the predicted capture of approximately 80% for this phase of implementation of the project.

**Draft totals

When completed in 2030, the federally-mandated project is predicted to reduce CSOs by 96% District-wide in an average year, improving the environmental health of multi-jurisdictional waterways, making them more attractive for recreational use, and spurring economic development. Importantly, implementation of the project will also greatly improve the health of the Chesapeake Bay, in accordance with goals established by the EPA Chesapeake Bay Program, as well as ongoing efforts by the executives of Virginia, Maryland, and the District.

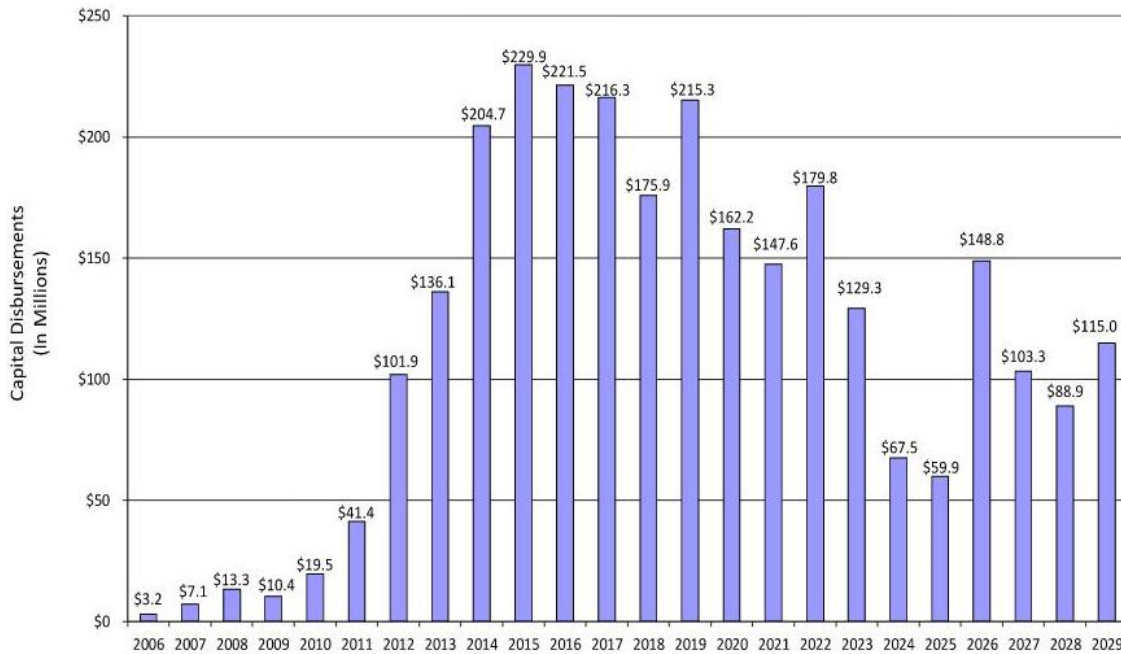

Life-to-Date Federal Payment and DC Water Expenditures

As of August 31, 2020, DC Water has spent approximately \$1.69 billion implementing the Clean River Project to reduce overflows into the local waterways. During the same period, DC Water received \$268.8 million in federal funding. In FY20, DC Water received \$8 million in federal appropriations.

Future Projected Expenditures

As the following chart demonstrates, DC Water is projecting to spend \$147.6 million on the project in FY 2021. Between FY 2021 and FY 2029, DC Water anticipates spending a total of approximately \$1.04 billion on the project.

There are significant stipulated penalties (fines) in the consent decree if DC Water is unable to meet the scheduled milestones to complete the project. These additional costs would be paid by DC Water customers, including the federal government. Further, on-time completion of the project is integral to compliance with the performance standards (DC Water Quality Standards and Clean Water Act standards) included in the permit issued to DC Water by EPA. Failure to meet these requirements would also subject DC Water and, ultimately, the District’s ratepayers, to significant fines.

The original project cost sharing plan called for 50% of the project to be funded by the federal government. To date, the federal government has contributed approximately 14% of total funding committed. Continued federal support is tremendously valuable to the District since federal payments can be leveraged on almost a 3 to 1 basis compared to the issuance of long-term capital debt. This debt avoidance helps reduce future water and sewer rate increases for DC Water customers, of which the federal government is the largest.

Local funding commitments are largely made up of long-term capital debt financed by DC Water through the Clean Rivers Impervious Area Charge (IAC). The table below projects the monthly charge for an average size residential customer. Please note the charge is only one portion of a DC Water customer bill and is charged each month regardless of water and sewer consumption.

Economic Recovery and Employment Impacts

The Clean Rivers Project is one of the largest public infrastructure projects in the District. Investments in these types of capital projects can play a significant role in economic recovery from Covid-19. The funds invested in Clean Rivers provide good paying jobs, and its expenditures cascade through the economy supporting manufacturing, materials and equipment suppliers, construction laborers as well as secondary economic impacts such as housing, restaurants and the like. A federal investment in the Clean Rivers project will help construct the tunnel system which will be in service providing useful benefits for several hundred years.

The DC Clean Rivers Project employed a more than 5,600 persons implementing the project to date. Approximately 2,660 or 47% of the persons employed by the program reside within the District or DC Water's service territory, which includes the suburban jurisdictions of Montgomery and Prince George's counties in Maryland, and Fairfax and Loudoun counties in Virginia.

In addition, DC Water has established an ambitious local jobs program that includes training and certification opportunities for District residents interested in green infrastructure construction and maintenance jobs. DC Water has been working with the University of the District of Columbia to provide this training, and to date has certified 78 District residents, 19 of whom were employed as of the end of FY2019. Some of those individuals who have found employment, have worked on DC Water's green infrastructure projects, where a goal of 51% of new jobs created by projects are contractually required to be filled by District residents.

DC Water v. First Hand Land (aka "1744 D Street")	General Litigation	DC Superior Court 2016 CA 000187 B (Complaint for Property Damage) Complaint Filed: 1/8/16 Served: N/A - DC Water is the plaintiff.	DOL: May 1, 2013. DC Water seeks recovery for damages to the Northeast Branch Tunnel Sewer where a condo was constructed over it, causing roughly \$3.0 million in damages to the sewer. DC Water also incurred approximately \$300,000 in damages razing the building. We sued the project developers, the permit expeditors who neglected to get DC Water's approval before permits were issued, the DCRA employees who issued permits without DC Water's approval, and the inspectors who failed to question distinctions between the approved plans and what was constructed (which was modified on the fly to avoid building into the sewer line). DISTRICT OF COLUMBIA WATER AND SEWER AUTHORITY | 1385 CANAL STREET, SE | WASHINGTON, DC 20003

March 1, 2021

The Honorable Mary M. Cheh
Office of Councilmember Mary M. Cheh
Chairperson, Committee on Transportation & the Environment
John A. Wilson Building
1350 Pennsylvania Avenue NW, Suite 108
Washington, D.C. 20004

Dear Chairperson, Cheh and Members of the Committee on Transportation & the Environment,

The COVID 19 pandemic has challenged the District and other cities around the world in ways we never could have foreseen. The residents and businesses of our city have acutely felt the impact and we're aware that many of our customers from all backgrounds are suffering because of the crisis. I always say that it is *the people* at DC Water that I am most proud of, and during this Public Health Emergency, this fact was made even more evident as we've worked to respond to this challenge.

Every year we come before the Committee on Transportation and the Environment to discuss the previous year's progress report, and while FY2020 has presented some unprecedented challenges for The Authority; we remained committed to being a world-class water utility. This means, that every decision, initiative, and action is driven by our mission to exceed expectations by providing high quality water services in a safe, environmentally conscious, and efficient manner. I will also add; it is my personal goal that we drive this mission through a lens of equity and ingenuity.

The following attachments are only a glimpse of the work of DC Water. I, along with my team, look forward to meeting with you all to discuss our last year-in-review during our March 15th Hearing.

Sincerely,

A handwritten signature in black ink, appearing to read "D. L. Gadis".
